SUMMARY

Full-stack and React Native engineer with three years in production. Owns the API, job queues, payments, admin console and three live mobile apps for a US-founded delivery platform, and has shipped a Gemini-powered chat feature to production. Merged open-source work in TypeScript and React. Works remotely and async from Lagos.

TECHNICAL SKILLS

Strong: TypeScript • React and Next.js • React Native and Expo • Node.js and Express • REST API design • PostgreSQL and Prisma • Redis • BullMQ job queues • Socket.IO real-time systems • Zustand and React Query • Payments and webhooks (Razorpay, Paystack) • Security auditing

Experienced: Tailwind CSS • MUI v6 • Framer Motion • Redux • Jest and React Testing Library • AWS (EC2, S3) • GitHub Actions • Expo EAS • Sentry • MongoDB • GraphQL • Gemini API • Swift and SwiftUI

EXPERIENCE

Lead React Native & Full-Stack Engineer | Mestranow

Remote, Contract | Nov 2025 - Present

Food delivery and logistics platform: customer, restaurant and delivery-partner mobile apps, an admin console and the API behind them. US-based founders.

- Sole owner of Mestranow's backend: a Node.js, Express, Prisma and PostgreSQL REST API serving three production mobile apps and a Next.js admin console, working directly with the CEO and CTO.
- Built push delivery on BullMQ with per-recipient idempotency keys so each FCM notification is processed exactly once, and moved all three apps from Expo push to FCM with zero downtime (an estimated 98% delivery rate).
- Owned the Razorpay and RazorpayX lifecycle: exactly-once refunds and driver payouts with idempotency safeguards and webhook testing through ngrok. Traced and fixed a production key misconfiguration that had taken checkout down.
- Built the order lifecycle as a server-enforced state machine (explicit allowed-transition table, transactional status updates) and live ride and delivery dispatch to drivers over Socket.IO. The Delivery Partner app restores duty state and the active job from server session state.
- Layered Zustand and React Query with optimistic updates (driver accept and cart actions roll back against server state), cutting redundant API calls by an estimated 40%.
- Fixed a driver app hang on tab switches and led cross-app consistency work: a unified notification center redesign and a shared toast and banner system across the three apps.
- Found and fixed an SSRF hole in an image-fetch endpoint during a 76-item production security and readiness audit, audited database index drift against live production, and resolved Prisma migration drift on Supabase (1,568-line baseline, 28 archived migrations).
- Deployed the Next.js admin console (MUI v6 DataGrid) and the public landing site (mestranow.com) to AWS EC2 behind nginx and PM2, with S3 storage under profile-based IAM.
- Shipped the three React Native apps on iOS and Android at an estimated 95% crash-free rate, with an Expo EAS over-the-air pipeline, source-map upload, and Sentry crash monitoring on the Delivery Partner and Food Service apps.

Freelance Full-Stack Developer | Self-Employed

Remote | May 2025 - Present

Client web and mobile applications.

- Built a production gym chatbot on the Gemini API inside a React Native app, with session management and dynamic prompt engineering.
- Built server-rendered Next.js and TypeScript apps with GitHub Actions and Expo EAS pipelines; caching strategies improved API performance by 40%.

Frontend Developer | Vorbtech Innovative Solutions

Remote, Contract | Dec 2024 - May 2025

Contract frontend work on React and TypeScript web applications.

- Lifted Lighthouse scores from 65 to 90+ and cut page loads by 15% through bundle optimization, lazy loading and code splitting.
- Set up Jest and React Testing Library with ESLint and Prettier standards, cutting post-release bugs by 50%.
- Introduced an Agile workflow and mobile-first layouts, reducing mobile bounce rate by 30% and lifting engagement by 15%.

Mobile Development Intern | Uleval Technology

Hybrid, Lagos | Jun 2024 - Dec 2024

Alora, a video-sharing mobile app built in React Native.

- Cut video streaming latency from over 10 seconds to under 2 through caching, FFmpeg compression and CDN delivery, lifting retention by 35%.
- Added Appwrite auth, real-time sync and storage that carried 1,000+ sign-ups in the first month with zero security incidents.
- Built real-time search and a recommendation engine that improved content discovery by 50% and video views by 40%.

Frontend Engineer | Okike Consults

Remote, Contract | Aug 2023 - May 2024

DevSpax (devspax.com), a developer challenge platform.

- Shipped responsive layouts, an upcoming-features page and API integrations in React with Tailwind CSS and Redux, using Framer Motion for interface animation.

SELECTED PROJECTS

- **Mestra live apps:** Mestra App on [Google Play \(com.mestra.mestra_app\)](https://play.google.com/store/apps/details?id=com.mestra.mestra_app) and the [App Store \(id6748778830\)](https://apps.apple.com/US/app/id6748778830); Mestra Delivery Partner on the [App Store \(id6749651892\)](https://apps.apple.com/US/app/id6749651892).
- **Aframp** (open source, github.com/kellymusk/Aframp) | Next.js, TypeScript, Redis: merged PRs including M-Pesa and MTN MoMo mobile money integration, KYC-tiered withdrawal limits with a per-user mutex against concurrent withdrawal-state corruption, Redis FX rate caching, an offline resilience layer with a bounded retry queue for idempotent order sync ([#388](#)) and a session fix that separates network failures from auth failures ([#769](#)).
- **EventWave** | MERN, Paystack: seat locking with optimistic locking and distributed reservation, Paystack webhooks and QR tickets; 100+ concurrent sessions with zero double-bookings.
- **TasteHub** | MERN, Redis, WebSockets, GraphQL: Redis caching cut query times by 60%; live vendor dashboard with WebSocket order updates and GraphQL admin queries; 99% uptime at 30+ concurrent users.
- **Convowave** | React Native, Socket.IO, Redux: real-time chat with automatic reconnection, offline message queuing and Redux persistence; 85%+ Jest coverage on core components.

EDUCATION

B.Eng. Computer Engineering | Caritas University, Enugu, Nigeria | 2025

AVAILABILITY & REMOTE WORK

Based in Lagos, Nigeria (WAT, UTC+1). Fully remote and async; distributed, cross-timezone collaboration with US and India teams is standard practice in my work. Overlap available with European and US hours.
